Individual protection measures, such as personal protective equipment

General protective and hygienic measures:

- Keep away from foodstuffs, beverages and feed.
- Immediately remove all soiled and contaminated clothing
- Wash hands before breaks and at the end of work.
- Avoid contact with the eyes.

Respiratory protection: Not necessary if room is well-ventilated.

Hand protection

Preventive skin protection by use of gloves is recommended.

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation. Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation.

Material of gloves

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application. Suitability (penetration time, material thickness) for a specific workplace should be discussed with the manufacturer of the protective gloves.

Penetration time of glove material

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

For the permanent contact gloves made of the following materials are suitable:

- Butyl rubber: Penetration time >480 min - Recommended thickness: 0,4 mm
- Nitrile rubber: Penetration time >480 min - Recommended thickness: 0,35 mm
- PVC: Penetration time >480 min - Recommended thickness: 0,5 mm

For the permanent contact of a maximum of 15 minutes gloves made of the following materials are suitable:

- Nitrile rubber. Penetration time 30 min - Recommended thickness: 0,13 mm
